# Introduction

## Software Category

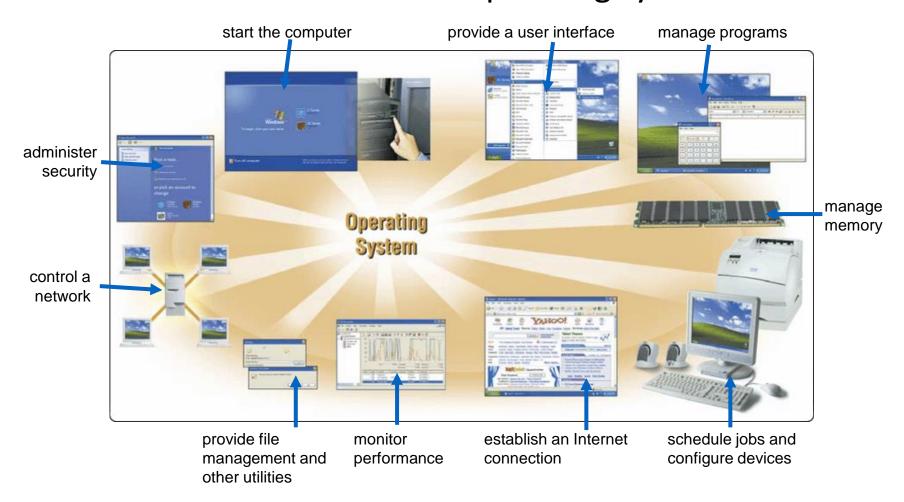

## System Software

• What is system software?

### Operating Systems

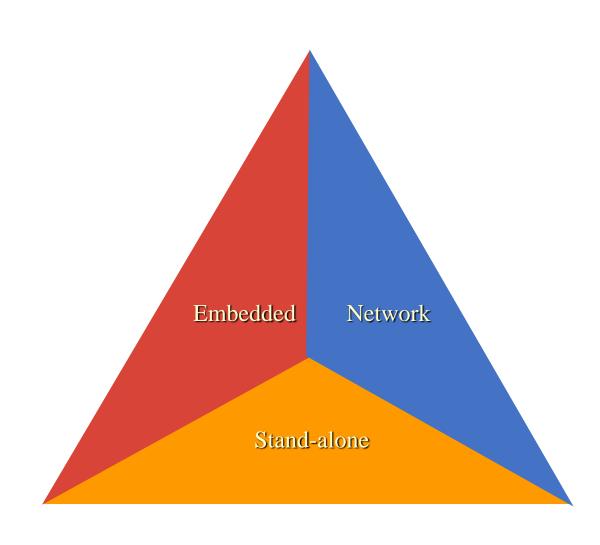

What are the functions of an operating system?

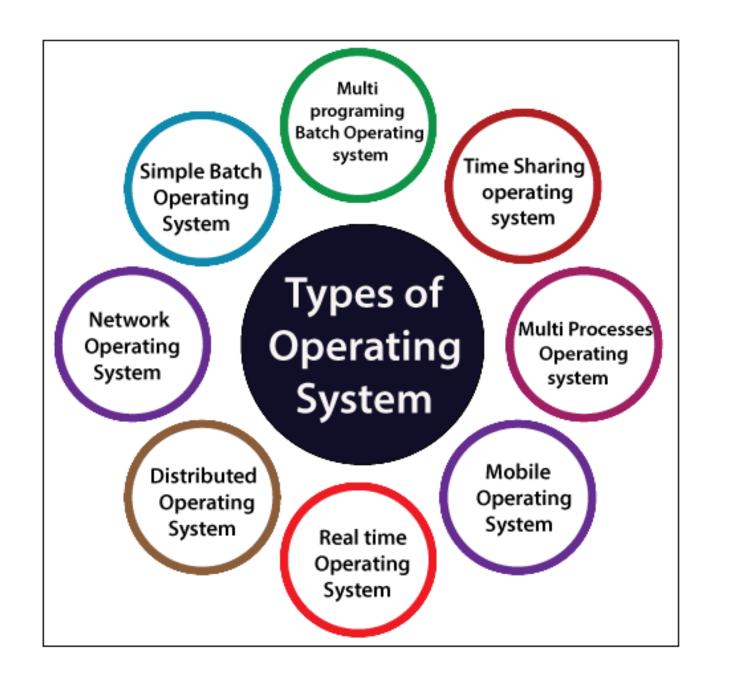

### OS Features

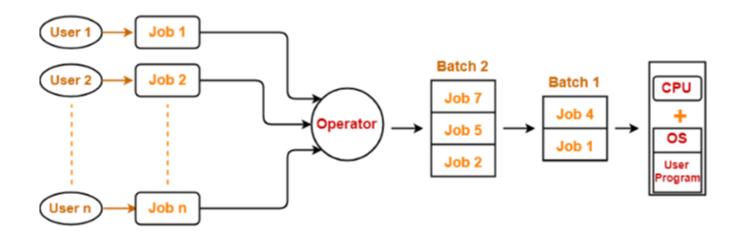

# Three categories of operating systems

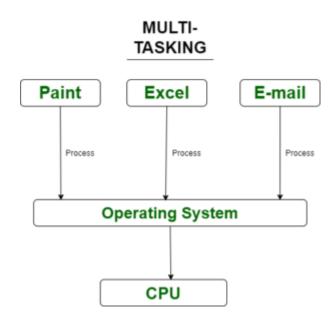

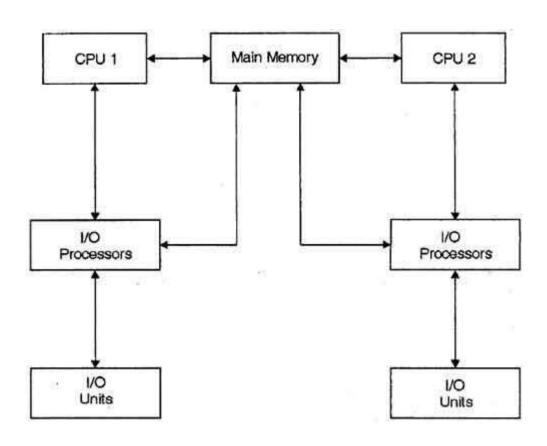

### Batch OS

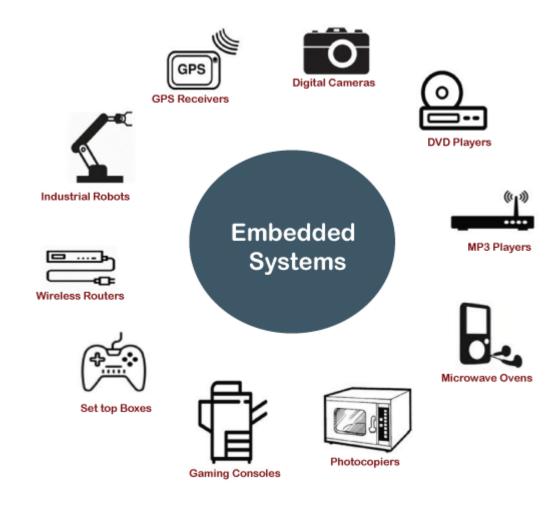

# Multi Programming

## MultiProcessing

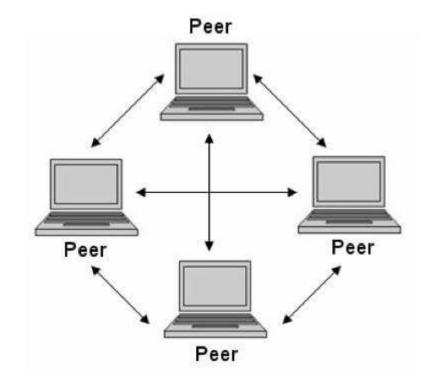

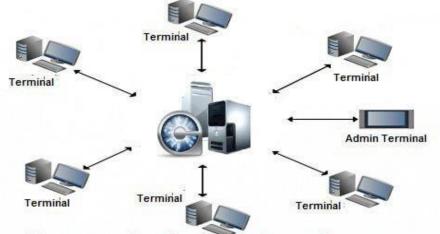

## Real Time OS/Embedded OS

## Hand Held/Mobile OS

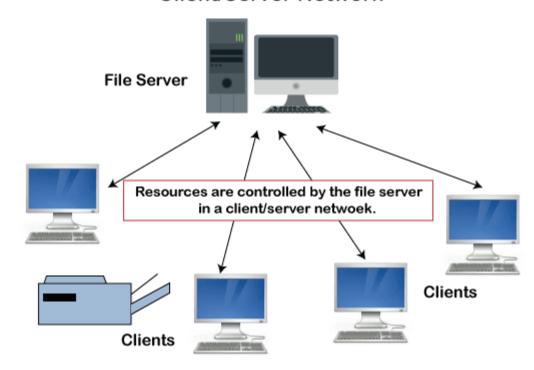

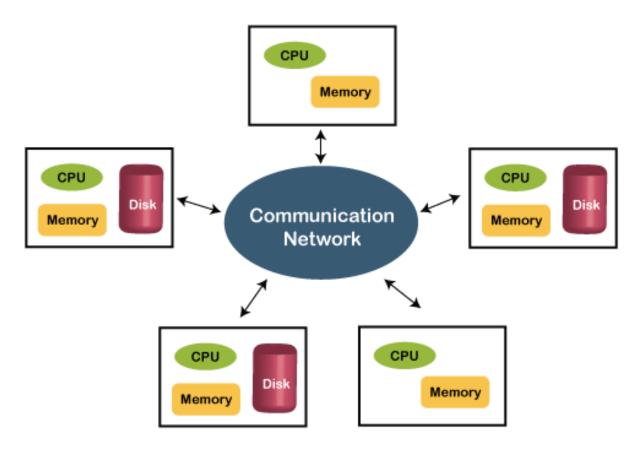

### **Network Operating System**

#### **Client/Server Network**

#### **Distributed Operating System**

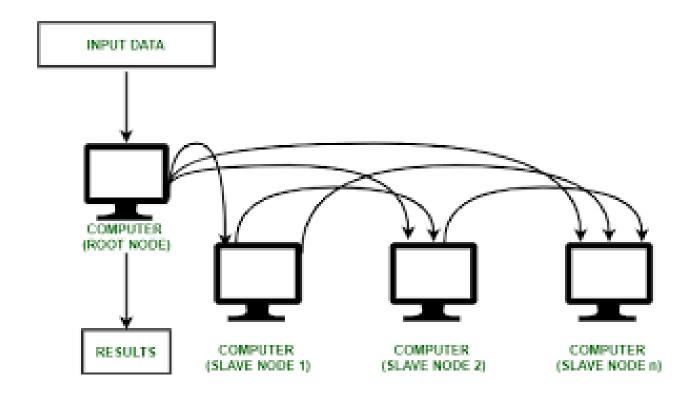

## OS and technology Related

- Cloud Computing
- Cluster Computing
- Distributed Computing
- Virtualization Technology
- Big Data
- Contenarization (docker- Containter)

 Teknologi komputer berbasis sistem Cloud ini merupakan sebuah teknologi yang menjadikan internet sebagai pusat server untuk mengelola data dan juga aplikasi pengguna

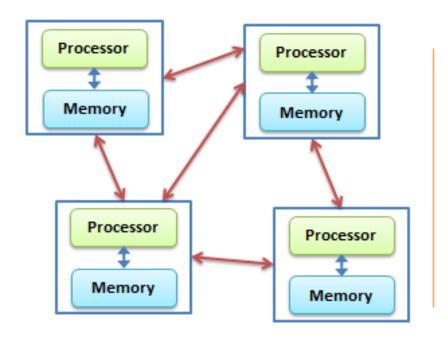

## Cluster Computing

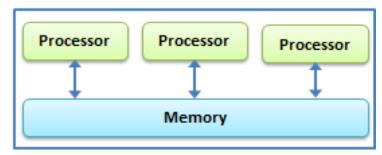

## Paralel Computing

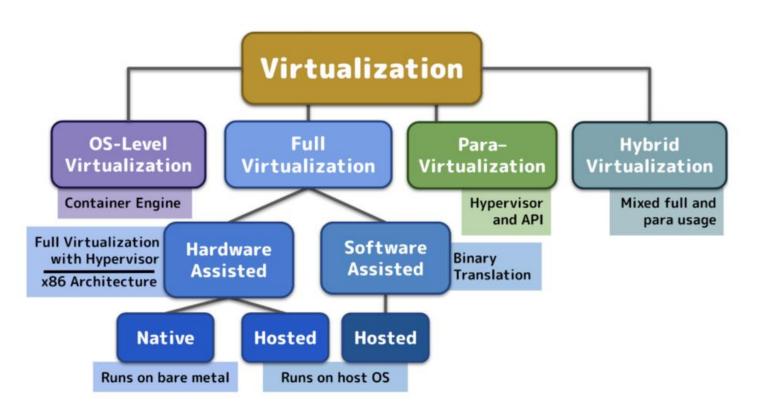

#### **Distributed Computing**

#### **Parallel Computing**

#### Types of Server Virtualization

#### Containerization

- Container merupakan alternatif Virtualisasi OS yang ringan yang memungkinkan aplikasi berjalan dalam lingkungan yang dibutuhkan.
- Jika kita install aplikasi biasanya harus nyiapkan OSnya, API yang dibutuhkan, dll. Container sudah build semua environment yang dibutuhkan termasuk OS requirement
- Docker adalah aplikasi untuk menyatukan berbagai file software dan pendukungnya dalam sebuah wadah (container) agar memudahkan proses pengembangan software.
